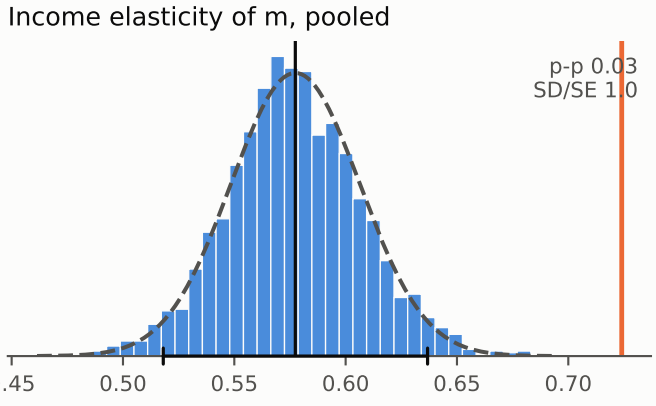
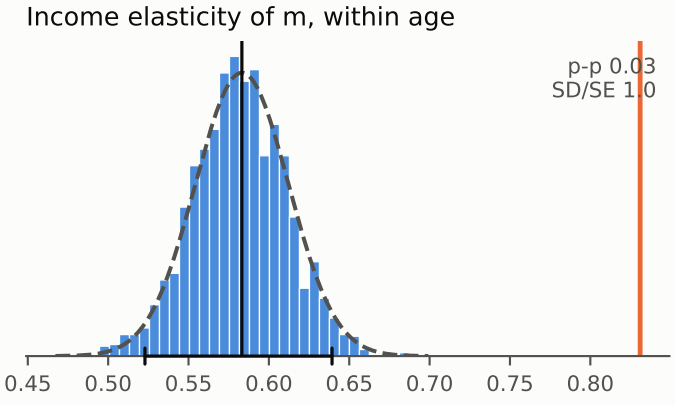
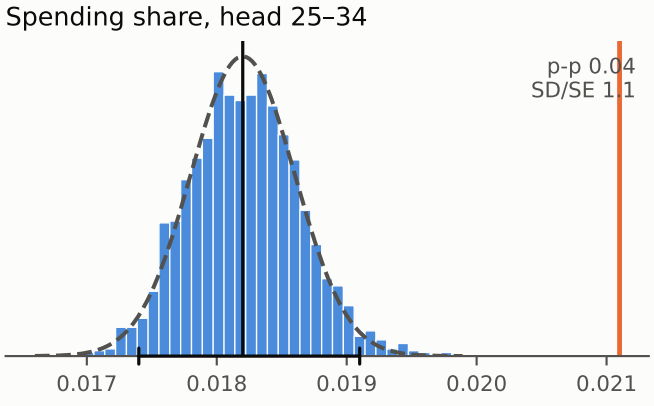
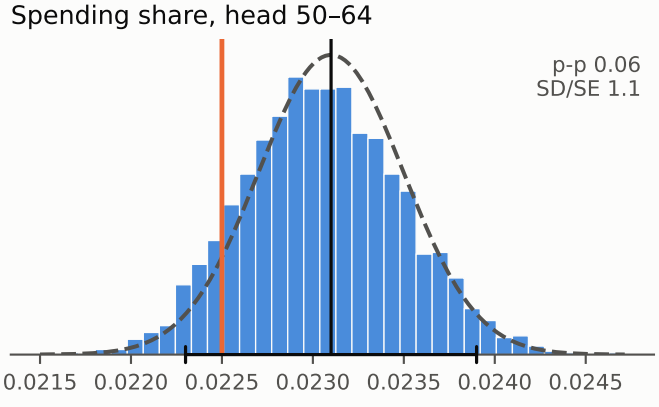
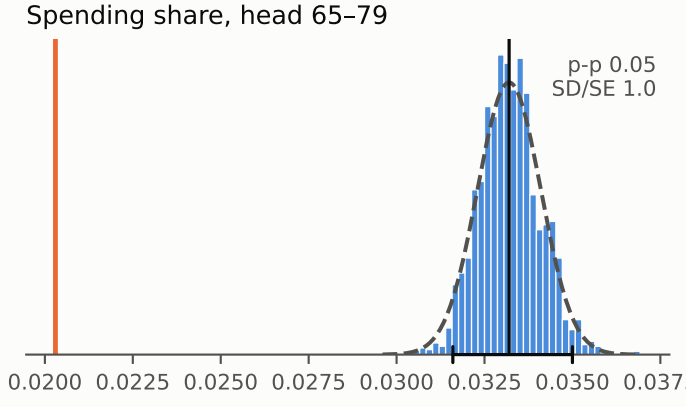
BID2 Draft-November targets: Bayesian bootstrap of the survey moments
ENIGH 2016+2018, 2,000 replicates; ENASEM 2018→2021, 4,000 replicates

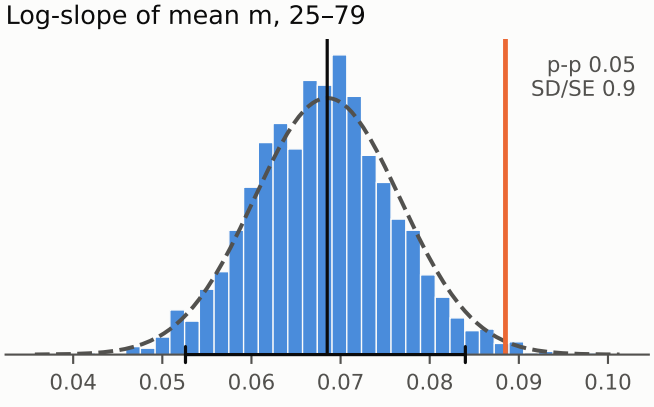


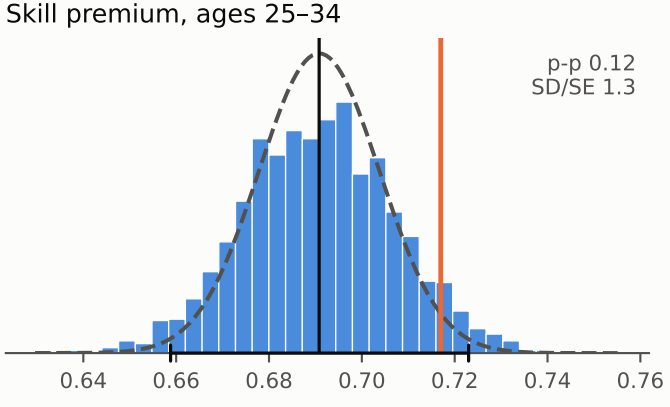


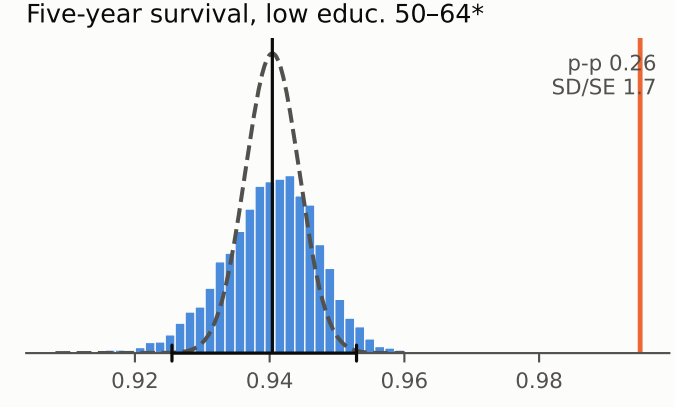


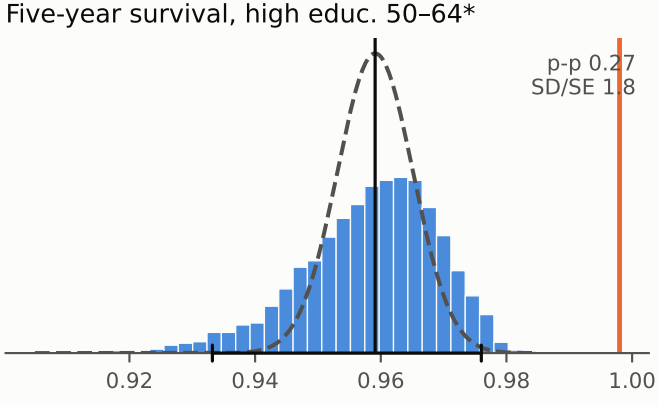












* ENASEM panels use the 2018→2021 wave pair, not the draft's 2012–2021 panel; levels are not comparable, widths are.

Bayesian bootstrap posterior, PSU-clustered
Normal with the draft's standard error
Point estimate and 95% credible interval
Model moment at the estimates (tab:moment_match_md)
