

Out-of-pocket health spending rises steeply with age

Estimated individual quarterly OOP health spending by age and sex, Mexico 2024 (two independent allocation methods)

Source: ENIGH 2024 (INEGI); utilization weights from ENSANUT Continua 2024 (INSP). Tier 3: individual profiles are ESTIMATES conditional on an allocation rule, not observed data; household regression coefficients can be negative (ages 5–14).

Shaded band: 95% CI, design-based (strata x PSU x weights).

Out-of-pocket spending only; public in-kind provision (IMSS/ISSSTE/SSA services) is not included. Constant Aug–Nov 2024 pesos (general INPC).
