

Validation: the ENIGH-estimated profile against ENASEM's observed profile

Quarterly OOP health spending, ages 50+, by sex, 2024

● ENASEM 2024, observed individual OOP ● ENIGH 2024, Tier 3 estimate (NTA allocation)

Sources: ENIGH 2024 Tier 3 (NTA-style allocation, ENSANUT utilization weights) vs ENASEM 2024 observed individual spending (annual amounts / 4). ENASEM asks hospitalization, visits, procedures and a normal-month medication amount x 12; ENIGH records all household health rubros. Recall design and item coverage differ; levels are not expected to coincide exactly. Out-of-pocket spending only; public in-kind provision (IMSS/ISSSTE/SSA services) is not included. Constant Aug-Nov 2024 pesos (general INPC).
