

Zero health spending is most common in poor households – even those with older members

Share of households reporting zero OOP health spending in the quarter, by income decile, 2024

Source: ENIGH 2024 (INEGI), Tier 1. Zero OOP spending among households containing a member aged 65+ is consistent with unmet need rather than good health (see the ENSANUT forgone-care evidence, Fig. 6). Out-of-pocket spending only; public in-kind provision (IMSS/ISSSTE/SSA services) is not included. Constant Aug–Nov 2024 pesos (general INPC).
